| | Subject | | | | | | | |

Prerequisite: Material Science, Manufacturing process

Course Objectives: To acquaint students with the basics of additive manufacturing technology and various techniques of it. They can define their advantages, limitations and applications in various fields of engineering.

| Course | Dutcomes: At the end of the course the student will be able to: |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Explain additive manufacturing, its working principle, process parameters and can |
| | identify AM processes for specific application |
| CO-2 | Identify a specific technique for a given application by applying Vat photo polymerization process. |
| CO-3 | Classify various extrusion based and sheet lamination based additive manufacturing processes and categorize these processes for a specific application. |
| CO-4 | Select a Powder Bed Fusion Processes for an engineering application. |
| CO-5 | Apply direct energy deposition processes and identify suitable post-processing for |
| | the AM product. |

| SYLL | ABUS |
|----------|-------------|
| UNIT - I | Periods: 9L |

INTRODUCTION TO ADDITIVE MANUFACTURING & APPLICATIONS

Development of Additive Manufacturing Technology: Computer-Aided Design Technology, Associated Technologies, Introduction to AM, AM evolution, Distinction between AM & CNC machining, Steps in AM, Classification of AM processes, Advantages of AM and Types of materials for AM.

Applications for Additive Manufacture: Introduction, The use of AM to Support Medical Applications, Aerospace and Automotive Applications.

UNIT - IIPeriods: 9LVAT PHOTO POLYMERIZATION PROCESSES & JETTING PROCESSES

VAT Photo polymerization Processes: Stereolithography (SL), Materials, SL resin curing process, SL scan patterns, Micro-stereolithography, Mask Projection Processes, Two-Photon vat photopolymerization, Process Benefits and Drawbacks, Applications of Vat Photopolymerization.

Material and Binder Jetting: Evolution, Materials, Material Processing Fundamentals, Material Jetting Machines, Process Benefits and drawbacks, binding materials and systems.

| UNIT - III | Periods: 12L |
|-----------------------------------------|-----------------|
| EXTRUSION-BASED AND SHEET LAMINA | ATION PROCESSES |

Extrusion Based AM Processes: Fused Deposition Modelling (FDM), Principles, Materials, Process Modelling, Benefits and Drawbacks, Applications of Extrusion-Based Processes.

Sheet Lamination AM Processes: Bonding Mechanisms, Materials, Laminated Object Manufacturing (LOM), Ultrasonic Consolidation (UC), Gluing, Thermal bonding, LOM and UC applications.

Case study (for internal evaluation): Preparation of hexagonal nut on extrusion based 3d Printer

| UNIT - IV | Periods: 9L |
|-----------------------------|-------------|
| POWDER BED FUSION PROCESSES | |

Powder Bed Fusion Processes : Selective laser Sintering (SLS), Materials, Powder fusion mechanism and powder handling, Process Modelling, SLS Metal and ceramic part creation, Electron Beam melting (EBM), Process, Benefits and Drawbacks, Applications of Powder Bed Fusion Processes.

IV YEAR - I SEMESTER

| ROBOTICS | | | | | | | | |
|------------|---------------------|---|--------|----|-----------|----------|-------|---------|
| Code | Category | - | Period | ls | Sessional | End Exam | Total | Credits |
| | | L | Т | Р | Marks | Marks | Marks | |
| MEC 411(B) | Emerging Subject | 2 | 1 | 0 | 40 | 60 | 100 | 3 |

Prerequisite: Basic Engineering Mathematics, Kinematics of Machinery, Basic Electrical and electronics engineering, Computer Programming.

Course Objectives: The objective of this course is to impart knowledge about robots for their control and design in various industrial and general applications .

| Course | Outcomes: At the end of the course the student will be able to: |
|--------|---------------------------------------------------------------------------------|
| CO-1 | Explain the anatomy of robots, workspaces, robot types, end effector functions, |
| | and principles of actuation and drive systems. |
| CO-2 | Apply kinematics, DH parameters, obstacle-aware trajectory planning, and |
| | control systems for accurate, adaptable, and safe robot motion. |
| CO-3 | Describe various sensors, feedback systems and image processing techniques in |
| | robot. |
| CO-4 | Apply programming languages to develop robotic systems and control their |
| | behavior. |
| CO-5 | Comprehend the application of AI and ML concepts for operation of robots |

| SYLLABUS |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UNIT - I Periods: 6L+3T=8 |
| BASICS OF ROBOTICS |
| Definition and scope of robotics, Historical overview of robotics, Laws of robotics, overview |
| of robotic systems and components, Robot workspaces and configurations, Types of robots and |
| their applications, End effectors and grippers for different tasks and selection criteria. Actuation |
| and drive systems in robot. |
| |
| (For Internal Evaluation) |
| Task: Introduction to Robot Analyzer Software |
| |
| UNIT - II Periods: 8L+4T=13 |
| KINEMATICS AND CONTROL OF ROBOT |
| Kinematics: Scaling, Rotation and homogenous transformation matrix, Forward kinematics |
| and inverse kinematics, Denavit Hartenberg (DH) parameters, |
| Trajectory planning: Trajectory planning and path generation for robot motion- steps in |
| trajectory planning, Joint Space Techniques, Cartesian Space Techniques. |
| Robot Control: P,I,D, PD, PI, PID control, adaptive control. |
| - |
| (For Internal Evaluation) |
| Task: Perform the Forward kinematics of a 2-DOF planar robot. 3-DOF anthropomorphic |
| arm & a 3-DOF wrist and KIIKA KR5 Arc Robot |
| |
| UNIT - III Periods: 6L+3T=9 |
| SENSORS AND COMPUTER VISION IN ROBOT |
| Feedback System: Open and closed loop feedback systems. |
| Robot sensors: Sensor types and characteristics (Range, proximity, vision, force and torque), |
| Sensor fusion and filtering techniques. |
| Computer Vision in Robotics: Image processing and feature extraction, Object detection, |
| tracking, and recognition, Visual servoing and robot vision applications. |
| |
| (For Internal Evaluation) |
| Task: Creating Robot Joint Trajectories |
| UNIT - IV Periods: 6L+3T=9 |
| ROBOTIC PROGRAMMING, SIMULATION AND APPLICATIONS |
| Programming languages for robotics (C++, Python, ROS), Behavior-based programming and |
| robot architectures, Robot simulation and visualization tools. |
| |
| Applications: Robotics at Agriculture, Automotive, Supply Chain, Healthcare, Warehouses - |
| Applications: Robotics at Agriculture, Automotive, Supply Chain, Healthcare, Warehouses - material Transfer, Material handling, loading and unloading; Processing - spot and continuous |

(For Internal Evaluation) Task: Programming of Mobile Robot

| UN | IT - V Periods: 6L+3T=9 |
|------|----------------------------------------------------------------------------------------------------------------------|
| AI | POWERED ROBOTICS |
| AI | and Machine Learning for Robotics: Reinforcement learning for robot control, Deep |
| lear | rning in perception and decision-making, |
| Ad | vanced Topics in Robotics: Human-robot interaction and collaboration, Mobile robots and |
| nav | rigation, Swarm robotics and multi-robot systems. |
| | |
| (Fo | r Internal Evaluation) |
| Tas | sk: Case study on AI robot. |

| SVI I ADUS |
|--------------------------------------------------------------------------------------------|
| <u>SYLLABUS</u> UNIT I Devie des 101 |
| UNII – I Periods: IUL |
| MEASUREMENT OF DISPLACEMENT |
| Definition – Basic principles of measurement – Measurement systems, generalized |
| configuration and functional description of measuring instruments - examples. Static and |
| Dynamic performance characteristics - sources of errors, Classification and elimination of |
| errors. |
| |
| Measurement of Displacement: Theory and construction of various transducers to measure |
| displacement – Piezo electric Inductive capacitance resistance ionization and Photo |
| electric transducers Calibration procedures |
| electric transducers, Canoration procedures |
| |
| UNIT – II Periods: 10L |
| MEASUREMENT OF TEMPERATURE & PRESSURE |
| Measurement of Temperature: Various Principles of measurement-Classification: |
| Expansion Type: Bimetallic Strip-Liquid in glass Thermometer; Electrical Resistance Type: |
| Thermistor, Thermocouple, RTD: Radiation Pyrometry: Optical Pyrometer: Changes in |
| Chamical Phase: Eusible Indicators and Liquid crystals |
| Chemical Thase. Pusible indicators and Elquid erystais. |
| Measurement of Pressure: Different principles used- Classification: Manometers Dead |
| weight pressure gauge Tester (Disten gauge) Dourden pressure gauges Dully medulus |
| weight pressure gauge. Tester (Fistori gauge), Bourdon pressure gauges, Burk modulus |
| pressure gauges Bellows – Diaphragm gauges. Low pressure measurement – Thermal |
| conductivity gauges, ionization pressure gauges, Mcleod pressure gauge. |
| |
| UNIT – III Periods: 8L |
| MEASUREMENTS OF LEVEL & FLOW |
| Measurement of Level: Direct methods - Indirect methods - Capacitive, Radioactive, |
| Ultrasonic, Magnetic, Cryogenic Fuel level indicators – Bubbler level indicators. |

Flow measurement: Rotameter, magnetic, Ultrasonic, Turbine flow meter, Hot - wire anemometer, Laser Doppler Anemometer (LDA)

UNIT – IV

Periods: 10L MEASUREMENTS OF SPEED, ACCELERATION & VIBRATION, FORCE, TORQUE AND POWER

Measurement of Speed: Mechanical Tachometers, Electrical tachometers, Non- contact type-Stroboscope

Measurement of Acceleration and Vibration: Different simple instruments - Principles of Seismic instruments - Vibrometer and accelerometer using this principle- Piezo electric accelerometer.

Measurement of Force, Torque and Power- Elastic force meters, load cells, Torsion meters, Dynamometers.

| UNI | IT – V | Periods: 10L | | | | | |
|------|-------------------------------------------------------------------------|-----------------------------------------------|--|--|--|--|--|
| ME | ASUREMENT OF STRESS-STRAIN & | HUMIDITY | | | | | |
| Stre | ess-Strain measurements: Various types of | of stress and strain measurements -Selection | | | | | |
| and | installation of metallic strain gauges- elect | rical strain gauge – gauge factor – method of | | | | | |
| usag | ge of resistance strain gauge for bending co | ompressive and tensile strains – Temperature | | | | | |
| com | pensation techniques, Use of strain gauges | for measuring torque, Strain gauge Rosettes. | | | | | |
| | | | | | | | |
| Mea | asurement of Humidity: Moisture conter | t of gases, Sling Psychrometer, Absorption | | | | | |
| Psyc | chrometer, Dew point meter. | | | | | | |
| | | | | | | | |

Prerequisite: Fluid Mechanics & Hydraulic Machinery, Design of machine Elements I & II

Course Objectives:

- To provide the knowledge and importance of Tribology in Design, friction, wear and lubrication aspects of machine components.
- To select proper grade lubricant for specific application and understand the behavior of tribological components.

| Course | Course Outcomes: At the end of the course the student will be able to: | | | | | | |
|--------|---------------------------------------------------------------------------------------|--|--|--|--|--|--|
| CO-1 | Calculate the viscosity of fluids and analyze the properties of surfaces | | | | | | |
| CO-2 | Determine the friction and wear of metals and non-metals | | | | | | |
| CO-3 | Analyze the behavior of hydrostatic step bearings. | | | | | | |
| CO-4 | Analyze the hydrodynamic behavior of journal bearings | | | | | | |
| CO-5 | Select proper materials for bearings and Analyze the behavior of coatings on surfaces | | | | | | |

| <u>SYLLABUS</u> | | | | | | | |
|---------------------------|------------------|--|--|--|--|--|--|
| UNIT – I | Periods: 6L+3T=9 | | | | | | |
| INTRODUCTION TO TRIBOLOGY | | | | | | | |
| | | | | | | | |

Tribology in design, tribology in industry Viscosity, flow of fluids, viscosity and its variation absolute and kinematic viscosity, temperature variation, viscosity index determination of viscosity, different viscometers, Tribological considerations Nature of surfaces and their contact; Physic mechanical properties of surface layer, Geometrical properties of surfaces, methods of studying surfaces; Study of contact of smoothly and rough surfaces

UNIT – II Periods: 6L+3T=9 FRICTION AND WEAR

Role of friction and laws of static friction, causes of friction, theories of friction, Laws of rolling friction; Friction of metals and non-metals; Friction measurements. Definition of wear, mechanism of wear, types and measurement of wear, friction affecting wear, Theories of wear; Wear of metals and non-metals.

Types of lubricants and their industrial uses; SAE classification, recycling, disposal of oils, properties of liquid and grease lubricants; lubricant additives, general properties and selection

UNIT – III Periods: 6L+3T=9 HYDROSTATIC LUBRICATION

Principle of hydrostatic lubrication, General requirements of bearing materials, types of bearing materials., Hydrostatic step bearing, application to pivoted pad thrust bearing and other applications, Hydrostatic lifts, hydrostatic squeeze films and its application to journal bearing, optimum design of hydrostatic step bearing

| UNIT – IV | Periods: 6L+3T=9 |
|-------------------------------|------------------|
| HYDRODYNAMIC THEORY OF LUBRIC | CATION |

Principle of hydrodynamic lubrication, Various theories of lubrication, Petroff's equation, Reynold's equation in two dimensions -Effects of side leakage - Reynolds equation in three dimensions, Friction in sliding bearing, hydro dynamic theory applied to journal bearing, minimum oil film thickness, oil whip and whirl, anti –friction bearing, hydrodynamic thrust bearing

| UNIT – V | Periods: 8L+4T=12 | | | | | | |
|--------------------------------------|------------------------------------------------------------|--|--|--|--|--|--|
| SURFACE ENGINEERING AN | SURFACE ENGINEERING AND MATERIALS FOR BEARINGS | | | | | | |

| NON-CONVENTIONAL ENERGY SOURCES (PROFESSIONAL ELECTIVE-IV) | | | | | | | | | |
|---------------------------------------------------------------|----------|---------|---|---|-----------|----------|-------|---------|--|
| Code | Category | Periods | | | Sessional | End Exam | Total | Credits | |
| Code | Category | L | Т | Р | Marks | Marks | Marks | Cicuits | |
| MEC 413(A) | PE | 3 | 0 | 0 | 40 | 60 | 100 | 3 | |

Prerequisite: Engineering Mechanics, Basic Thermodynamics.

Course Objectives: In the backdrop of depleting fossil fuels, the course is intended to give a overall perspective of the potential of non-conventional energy sources like solar, wind, ocean, geothermal etc. The course also attempts to stress the importance of direct energy conversion systems.

| Course | Dutcomes: At the end of the course the student will be able to: |
|--------|------------------------------------------------------------------------------------|
| CO-1 | Distinguish various renewable energy sources & principles of solar radiation. |
| CO-2 | Classify solar collectors, solar storage systems & demonstrate the various solar |
| | photovoltaic systems |
| CO-3 | Evaluate the performance characteristics of wind machines and classify the Bio-gas |
| | plants. |
| CO-4 | Elucidate the working principles of OTEC, tidal power generation & geothermal |
| | power plants. |
| CO-5 | Illustrate the principle and importance of MHD & Fuel cells. |
| | |

| SYLLABUS |
|---------------------------------------------------------------------------------------------------------------------|
| UNIT - I Periods: 9L |
| NON-CONVENTIONAL ENERGY RESOURCES & PRINCIPLES OF SOLAI RADIATION |
| Non-Conventional Sources of Energy: An overview, Energy Consumption, Details of Energy |
| usage in each sector in India, Consequences of Energy Consumption. |
| Principles of solar radiation: Solar constant, extraterrestrial and terrestrial solar radiation, |
| Direct & diffuse radiation, solar radiation on tilted surface. |
| UNIT - II Periods: 9L |
| SOLAR THERMAL SYSTEMS & SOLAR ENERGY STORAGE SYSTEMS |
| Solar Thermal Systems: Types of solar collectors-non-concentric & concentric type, flat plate |
| collectors, Absorber coatings. |
| Solar energy storage systems - Types & Applications - Solar Photovoltaic Systems |
| UNIT - III Periods: 10L |
| WIND ENERGY & BIO-MASS |
| Wind energy: Sources and potentials of WEC systems, horizontal and vertical axis wind |
| mills, performance characteristics, Betz criteria. |
| Bio-mass: Principles of Bio-conversion, Anaerobic/aerobic digestion, types of bio gas |
| digesters, Case study - utilization for cooking and economic aspects. |
| UNIT - IV Periods: 10L |
| GEOTHERMAL ENERGY & OCEAN ENERGY |
| Geothermal energy: Geothermal sources- classification- vapour, liquid dominating systems, |
| applications, potential in India. |
| Ocean energy: Ocean Thermal Energy Conversion (OTEC)-principles and thermodynamic |
| cycles. Energy of tides: Introduction, principles, components, operation methods, limitations of |
| tidal power generation. Wave energy conversion techniques. |
| UNIT – V Periods: 101 |
| DIRECT ENERGY CONVERSION & FUEL CELLS: |
| Direct energy conversion: Principles of DEC, Thermo-electric generators, seebeck, peltier and joul |
| Thomson effects, Selection of materials, applications. |
| Magneto Hydro dynamic generators (MHD): principles, dissociation and ionization, Therma |
| efficiency, MHD Engine, power generation systems. |
| Fuel cells: Design & principle of operation, classification, types of fuel cells, efficiency and application |
| of Fuel cells. |

Prerequisite: NIL

Г

Course Objectives: To make the students to learn and Apply the fundamentals of managerial economics the concepts of costs and break – even analysis. To acquaint the students with the different market situations and forms of business organization. To impart the knowledge of financial accounting.

| Course | Course Outcomes: At the end of the course the student will be able to: | | | | | | |
|--------|----------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|
| CO-1 | Differentiate micro vs macro-economics and apply the concepts of demand analysis & demand forecasting. | | | | | | |
| CO-2 | Apply costing concepts and evaluate the Break even problems. | | | | | | |
| CO-3 | Identify classes of market structure, Pricing Policies and business organizations. | | | | | | |
| CO-4 | Differentiate fixed and working capital ,explore sources of finance, depreciation techniques for various industries. | | | | | | |
| CO-5 | Prepare balance sheet of a business organization. | | | | | | |

| PO CO | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

| SYLLABUS |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UNIT - I Periods: 9L |
| INTRODUCTION TO MANAGERIAL ECONOMICS |
| Introduction to Managerial Economics: Definition; micro and macroeconomics; demand analysis - demand determinants, law of demand and its exceptions, elasticity of demand; Demand Forecasting, Factors governing demand Forecasting, Methods of demand forecasting - survey methods and statistical methods. |
| UNIT - II Periods: 91 |
| COST ANALYSIS |
| Cost Analysis: Cost concepts - opportunity cost, fixed vs. variable costs, explicit vs. implicit costs, out of pocket vs. imputed costs; Break Even Analysis -determination of break-even point. |
| UNIT - III Periods: 121 |
| MARKET STRUCTURES & BUSINESS ORGANIZATION |
| Market Structures: Types of competition and Markets; features of perfect competition; imperfect competition monopoly, monopolistic competition. Objectives and Policies of Pricing- Methods of Pricing. Business Organization: Features of different forms of Business Organization- Sole trader; partnership; joint stock company; public enterprises. |
| UNIT - IV Periods: 91 |
| INTRODUCTION TO CAPITAL & DEPRECIATION |
| Introduction to Capital: Capital and its significance, Types of Capital, Estimation of Fixed and Working capital requirements, Methods and sources of raising finance. |
| Depreciation : Causes of depreciation, Factors influencing depreciation, common methods of Depreciation. |
| |
| INTRODUCTION TO FINANCIAL ACCOUNTING |
| Introduction to Financial Accounting: Final accounts of a sole trader-preparation of trading account, profit and loss account, balance sheet. Case Study: Preparing a balance sheet of a sole trader with student teams. |

| MEC 413 (C) | PE | 2 | 2 1 0 | | 40 | 60 | 100 | 3 | | | | | |

Prerequisite: Metal cutting, Machine Tools & Metrology

Course Objectives:

To make students acquainted with a functional understanding of equipment, process, process parameters and various energy involved in an un-conventional machining.

| - | |
|-------------|---------------------------------------------------------------------------------------|
| Course | Outcomes: At the end of the course the student will be able to: |
| CO-1 | Explain the need of Un-Conventional Machining Processes and able to classify various |
| | processes |
| CO-2 | Elucidate the role of mechanical energy in Un-Conventional Machining Processes. |
| CO-3 | Apply the knowledge on machining electrically conductive material through electrical |
| | energy in Un-Conventional Machining Processes. |
| CO-4 | Describe the concept of machining the hard material using chemical energy and electro |
| | chemical energy. |
| CO-5 | Explain various thermal energy based Un-Conventional Machining Processes. |
| | |

| Applications of Artificial Intelligence. UNIT - II Periods: 8L+4T=12 HEURISTIC SEARCHING TECHNIQUES AND GAME PLAYING: Searching- Searching for solutions, uniformed search strategies – Breadth first search, depth first search, Bi-Directional Search and Uniform-Cost Search. Informed Search Algorithms (Heuristic search): Introduction, Heuristic evaluation function, Generate-and-Test, Best-First Search, A* Algorithm, Problem Reduction Algorithm, AO* Algorithms, Hill climbing, Simulated Annealing, Constraint Satisfaction Algorithm (CSP). Game Playing - Adversarial search, Games, mini-max algorithm, optimal decisions in multiplayer games, Problem in Game playing, Alpha-Beta pruning, Evaluation functions. UNIT - III Periods: 6L+3T=9 LOGIC AND KNOWLEDGE REPRESENTATION Knowledge: Associative networks, frame structures, conceptual dependencies and scripts, ontologies. Logic: Prepositional logic: syntax and semantics, First Order Predicate Logic (FOPL): Syntax and semantics, conversion to clausal form, inference rules, unification, and the resolution principles. Knowledge Acquisition and Expert System: Type of learning, Knowledge Acquisition, Early work in machine learning, learning by induction. Introduction to expert system, Phases of expert system, characteristics of expert system and a case study; UNIT - IV Periods: 6L+3T=9 MACHINE LEARNING Introduction to machine learning, Types of Learning, Supervised Learning – Regression - Classification, Unsupervised learning/Clustering: Similarity and Distance Measures, Clustering Techniques: K-Means Algorithm, Hierarchical Clustering, Clustering of Categorical Attributes; Reinforcement Learning, Applications of Learning. Prerequisite: Mathematics

Course Objectives: The course is intended to identify and develop operational research models, understand the mathematical tools to solve optimization problems, and develop a report that describes the model, the solving techniques and analyses the results.

| Course Outcomes: At the end of the course the student will be able to: | | | | | | | | |
|-------------------------------------------------------------------------------------------|--|--|--|--|--|--|--|--|
| Develop a linear programming and choose an appropriate method for obtaining | | | | | | | | |
| an optimal solution. | | | | | | | | |
| Estimate optimal solution for transportation and assignment problems. | | | | | | | | |
| | | | | | | | | |
| Compute the scheduled time of completion of a project by applying the concepts | | | | | | | | |
| of PERT/CPM for decision making and further Select an inventory model and | | | | | | | | |
| apply them in inventory management | | | | | | | | |
| Compute optimum replacement period and optimum Job sequencing by applying | | | | | | | | |
| various replacement models and sequencing models | | | | | | | | |
| Develop optimal schedule by applying the concept of game theory and further | | | | | | | | |
| use Queuing models to estimate the average waiting time | | | | | | | | |

Prerequisite: Basic Thermodynamics, Applied Thermal Engineering -II

Course Objectives: To create awareness on various alternate fuels as a primary source of energy, understand their relative importance and limitations with reference to various distinct applications and to acquaint the student with their production.

| Course | Course Outcomes: At the end of the course, the student will be able to: | | | | | | | | |
|--------|----------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|--|--|
| CO-1 | Explain the need for alternate fuels, categorize and outline their relative merits and | | | | | | | | |
| | demerits. | | | | | | | | |
| | | | | | | | | | |
| CO-2 | Describe the harmful effects of emissions and further explain emission norms. | | | | | | | | |
| CO-3 | Evaluate the properties of different gaseous fuels and further study the working of engines using these fuels. | | | | | | | | |
| CO-4 | Demonstrate the production of bio-diesel fuel, illustrate and compare their | | | | | | | | |
| | characteristics and further investigate the performance of engines using bio-diesel. | | | | | | | | |
| CO-5 | Outline the layout of fuel cell driven and solar powered vehicles. | | | | | | | | |

| SYLLABUS | | | | | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|
| UNIT - I Periods: 8L | | | | | | |
| INTRODUCTION TO ALTERNATE FUELS: | | | | | | |
| Availability and properties of alternate fuels, general use of alcohols, LPG, hydrogen, ammonia, CNG and LNG, vegetable oils and biogas, merits and demerits of various alternate fuels. | | | | | | |
| UNIT - II Periods: 81. | | | | | | |
| NEED FOR ALTERNATE FUELS: | | | | | | |
| Effects of constituents of Exhaust gas emission on environmental condition of earth (N_2 , CO ₂ , CO, NO _x , SO ₂ , O ₂) Pollution created by Exhaust gas emission in atmosphere. Greenhouse effect, Factors affecting greenhouse effect. Study of Global Carbon Budget, Carbon foot print and Carbon credit calculations. Emission norms as per Bharat Standard up to BS – IV. | | | | | | |
| UNIT - III Periods: 8L | | | | | | |
| GASES AS ALTERNATE FUELS: | | | | | | |
| Availability of CNG, properties, modification required to use in engines, performance and emission characteristics of CNG in SI & CI engines, performance and emission using LPG. Hydrogen- storage and handling, performance and safety aspects. | | | | | | |
| UNIT - IV Periods: 81 | | | | | | |
| DIESEL/BIO-DIESEL FUELS-OIL FEED STOCKS: | | | | | | |
| blend levels of bio-diesel-Testing, Bio diesel-Oxidation stability-Performance in Engines, Properties of bio-fuels and their importance in the context of IC Engines. Vegetable Oils: Various vegetable oils for engines, esterification, performance in engines, performance and emission characteristics of bio diesel and its characteristics. | | | | | | |
| UNIT - V Periods: 8L | | | | | | |
| FUEL CELL AND SOLAR DRIVEN VEHICLES | | | | | | |
| FUEL CELL AND SOLAR DRIVEN VEHICLES Fuel cell driven vehicles: Concept of Fuel cells based on usage of hydrogen and methanol, Layout of fuel cell driven vehicles, advantages and limitations, specifications, system components. Power rating and performance, Heat dissipation. Solar driven vehicles: Layout of solar driven vehicles, advantages and limitations, specifications, system components. | | | | | | |

| SYLL | ABUS |
|--------------------------------------|------------------|
| UNIT - I | Periods: 6L+3T=9 |
| UNIT TITLE: Conduction Hoot Transfor | |

UNIT TITLE: Conduction Heat Transfer

Basic Concepts:

Modes of heat transfer – Basic laws of heat transfer – General heat conduction equation in Cartesian, Cylindrical and Spherical coordinates.

One-Dimensional Steady State Heat Conduction:

Temperature distribution and heat conduction in homogeneous slabs, coaxial cylinders and concentric spheres – Overall heat transfer coefficient - Electrical analogy - Critical radius of insulation. Systems with variable Thermal conductivity – Systems with internal heat generation, Temperature distribution and heat transfer in long fins, short fins and fins with insulated tip – fin effectiveness and fin efficiency.

NOTE: Case study on Fins

| UNIT - II | Periods: 6L+3T=9 |
|----------------------------------------------------|-----------------------------------|
| UNIT TITLE: Transient Heat Conduction & | & Dimensional Analysis |

Transient heat conduction (One-Dimensional):

Systems with negligible internal resistance – Significance of Biot and Fourier Numbers - Chart solutions of transient conduction systems.

Dimensional Analysis:

Buckingham's π -theorem – Dimensional analysis applied to forced convection and natural convection – Significance of various non-dimensional numbers.

NOTE: Case study on applications of Transient Heat Conduction

| UNIT - III | Periods: 6L+3T=9 |
|--------------------------------------|------------------|
| UNIT TITLE: Convective Heat Transfer | |

Forced Convection: External Flow – Boundary layer theory - flow over a horizontal flat plate – flow across cylinders and spheres - Empirical correlations for Nusselt number. Internal Flow - velocity and thermal boundary layers in laminar flow through pipe – hydrodynamic and thermal entry lengths - Empirical correlations for Nusselt number. Reynolds and Colburn analogies for turbulent flow.

Natural Convection: Velocity and thermal boundary layers in heat transfer by natural convection from a vertical plate - empirical correlations for Nusselt number for natural convection from plates and cylinders.

NOTE: Case study on applications of Convection

| UNIT - IV | | Periods: 6L+3T=9 |
|---------------------------------|--------|---------------------------------|
| UNIT TITLE: Heat Exchangers and | Heat ' | Fransfer in Phase Change |

Heat Exchangers: Classification – Overall heat transfer coefficient - Fouling factor – LMTD and NTU methods for Parallel flow and Counter flow heat exchangers

Boiling and Condensation: Regimes of saturated pool boiling of water – Drop-wise and film-wise condensation – Nusselt's analysis for laminar film-wise condensation on a vertical plate and horizontal pipes.

NOTE: Case study on Shell and tube Heat Exchangers

| UNIT - V | Periods: 6L+3T=9 |
|------------------------------------------------|------------------|
| UNIT TITLE: Radiation Heat Transfer Con | icepts |

Thermal Radiation: Emissivity characteristics and laws of Black body radiation – Irradiation– laws of Planck, Wien, Kirchoff, Stefan and Boltzmann

Radiation Heat Transfer: Heat exchange between two black bodies – shape factor, Heat exchange between between (i) a small gray body with a large enclosure, (ii) two parallel geometries - Radiation shields.

Prerequisite: Metal cutting, Machine tools & Metrology & Kinematics of machinery

Course Objectives:

To acquaint the students with calibrating measuring instruments and also to measure different parameters like angle, distance, flatness, gear tooth parameters and roundness & concentricity of spigot. Further the objective is also to introduce PLC and familiarize them with ladder programming for applications using sensor & traffic light applications.

| Course | Dutcomes: At the end of the course the student will be able to: |
|--------|-------------------------------------------------------------------------------------|
| CO-1 | Calibrate measuring instruments (Vernier caliper, Screw gauge, Dial gauge & |
| | Vernier height gauge). |
| CO-2 | Measure the included angle between two adjacent sides of a given specimen by |
| | using a Universal Bevel protractor and also taper angle of a tapered bar by using a |
| | Sine bar. |
| CO-3 | Determine the included angle of a V-block and Gear tooth parameters of a given |
| | spur gear by experimentation. |
| CO-4 | Check the concentricity and roundness of the given spigot by using a dial gauge, |
| | check the flatness of the given surface using Autocollimator and also determine |
| | the central distance between two holes in a template using Vernier height gauge. |
| CO-5 | List and Explain the working of components in a PLC and sensor kit & develop a |
| | ladder logic programme in PLC for applications using sensors & Traffic signal |
| | application. |

<u>SYLLABUS</u> LIST OF EXPERIMENTS

- 1. Determination of thermal conductivity of asbestos powder at different heat inputs in hollow sphere.
- 2. Determination of thermal conductivity of glass wool at different heat inputs in composite cylinder.
- 3. Determination of thermal conductivity of metal rod (Brass).
- 4. Determination of thermal conductivity of Liquid (Liquid Paraffin)
- 5. Determination of overall heat transfer coefficient of composite wall.
- 6. Determination of convective heat transfer coefficient of vertical cylinder in free convection.
- 7. Determination of convective heat transfer coefficient of horizontal pipe in forced convection.
- 8. Determination of Stefan-Boltzmann constant.
- 9. Determination of Emissivity of Grey body.
- 10. Determination of fin effectiveness and efficiency under forced convection.
- 11. Determination of time interval in different mediums under unsteady state heat transfer.
- 12. Determination of condensation coefficient in film and dropwise condensation.
- 13. Determination of overall heat transfer coefficient of a double pipe heat exchanger.

٦

GUIDELINES

The industrial training program is for a minimum duration of a fortnight and can be extended to one month. The student can choose an industry of his/her choice for the program. It has to be carried out at the end of III year – II semester The student has to submit a comprehensive report at the end of the program.

The evaluation process is done in the final year Ist semester and is based on internal Viva – voce examination.

| PROJECT PHASE-I | | | | | | | | | | |

| | | L | Т | Р | Marks | Exam | Marks | Credits | | |
| MEC 419 | PR | - | - | 4 | - | 100 | 100 | 2 | | |

Prerequisite: All Courses of Mechanical Engineering

Course Objectives: The project work is intended to give the student an opportunity to apply the theoretical and practical concepts of sciences, mathematics and engineering to formulate and analyze engineering problems by using experimentation / analytical methods / software tools to obtain valid solutions, which are innocuous to the environment & beneficial to the society. The project work also envisions to imbibe the importance of human ethics, working in teams, enhancing the managerial competencies and skills of communication and presentation.

| Course | Course Outcomes: At the end of Project-Phase-I, the student will be able to: | | | | | | | |
|--------|-------------------------------------------------------------------------------------|--|--|--|--|--|--|--|
| CO-1 | Formulate an engineering problem from the gaps identified from the literature (or) | | | | | | | |
| | by observing the societal/industrial requirements. | | | | | | | |
| CO-2 | Devise a solution methodology and chart out its implementation. | | | | | | | |
| CO-3 | Assess the worthiness of the project in terms of its impact on meeting the needs of | | | | | | | |
| | the society for sustainable development. | | | | | | | |
| CO-4 | Develop the ability to work as a team member for the accomplishment of the project. | | | | | | | |
| CO-5 | Comprehend the design of experiments/model and/or usage of software tools. | | | | | | | |
| CO-6 | Communicate orally and in written format with dexterity on the Project. | | | | | | | |

| Course Outcomes | PSO1 | PSO2 |
|-----------------|------|------|
| CO-1 | 3 | 2 |
| CO-2 | 3 | 2 |
| CO-3 | 3 | 1 |
| CO-4 | 2 | 1 |
| CO-5 | 3 | 3 |
| CO-6 | 2 | 1 |

GUIDELINES

In the project first phase, the student is exposed to the requirements to be met in the project. The student is given an opportunity to decide the area of work based on his interest. Thereafter, the student has to review the literature and summarize the findings. Based on the review, the student and the guide finalize the problem and chart out the procedure for executing the project work.

- For analytical work, the governing equations and mathematical modeling has to be completed.
- For projects involving experimental analysis, the setting up of experimentation, procurement of materials & accessories should be completed.
- For projects involving simulation using software tools, modeling should be completed.
- For projects involving fabrication of prototypes, the basic design & development of the model and procurement of accessories should be completed.

The evaluation of Phase-I of the project work is based on an internal Viva-voce examination which is conducted twice. The first evaluation is done in the mid of the semester followed by the final evaluation at the end of the semester. The student has to submit a report.

GUIDELINES

In the second phase of the project work, the student should continue the work from the stage where he has left in the phase-I.

The evaluation of Phase-II of the project work is based on both internal and external examination. The internal evaluation is done in the mid and also at the end of the semester. The students have to present their findings before a review committee which is followed by Viva – voce in both the internal and external examinations
